

Curl --connect-timeout 600 <http://www.example.com/>

Allows you to append to the target file instead of overwriting it.

Curl --dns-servers 8.8.8.8 <http://www.example.com/>

This option allows you to list DNS servers curl should use instead of the system default.

Curl --http3 <http://www.exmaple.com:8008/>

Specifically tell curl to use the http3 protocol to connect to the host and port provided with a https.

Curl <http://www.examples.com/help.txt> --output file.txt

If you need to retrieve a file from a remote server via a URL easy way to save file locally

Curl --progress-bar <http://www.example.com/help.txt> --output file.txt

Displays the progress of the file transfer when combined with the output option

- Curl -i makes next URL use its separate set of options
